SPEED UTV – COLAPSIBLE STEERING COLUMN

SPEED UTV

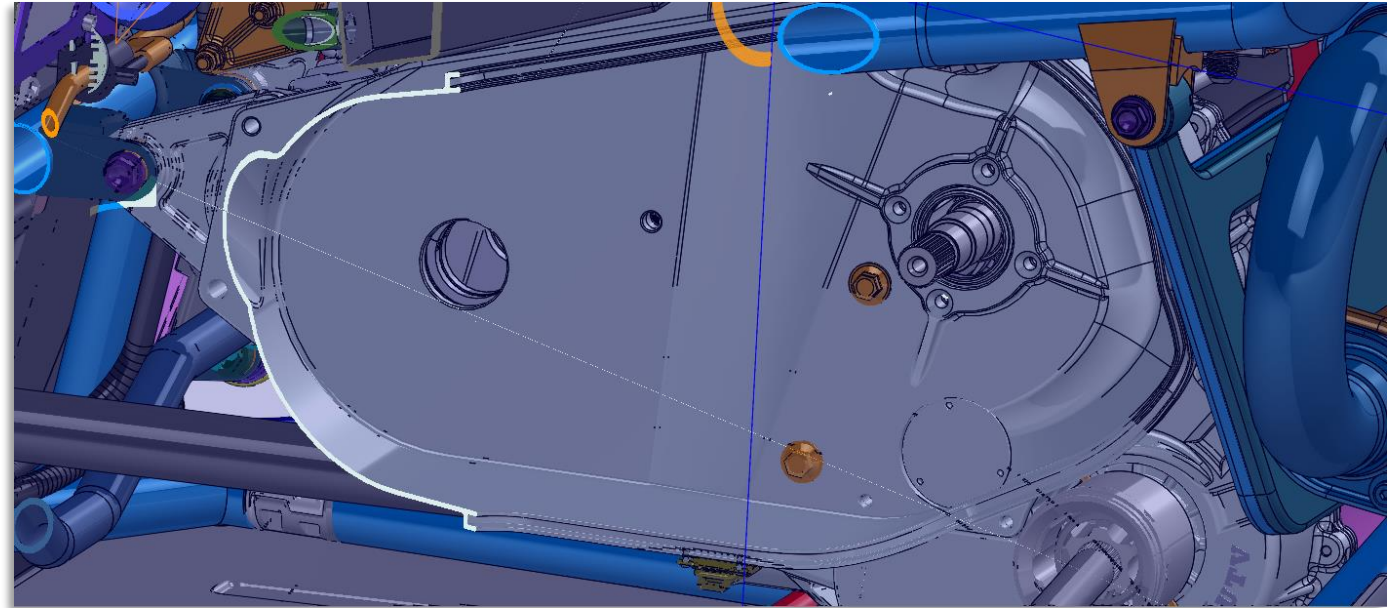

The Speed UTV has a collapsible steering column for ease of servicing and safety in the case of an extreme crash

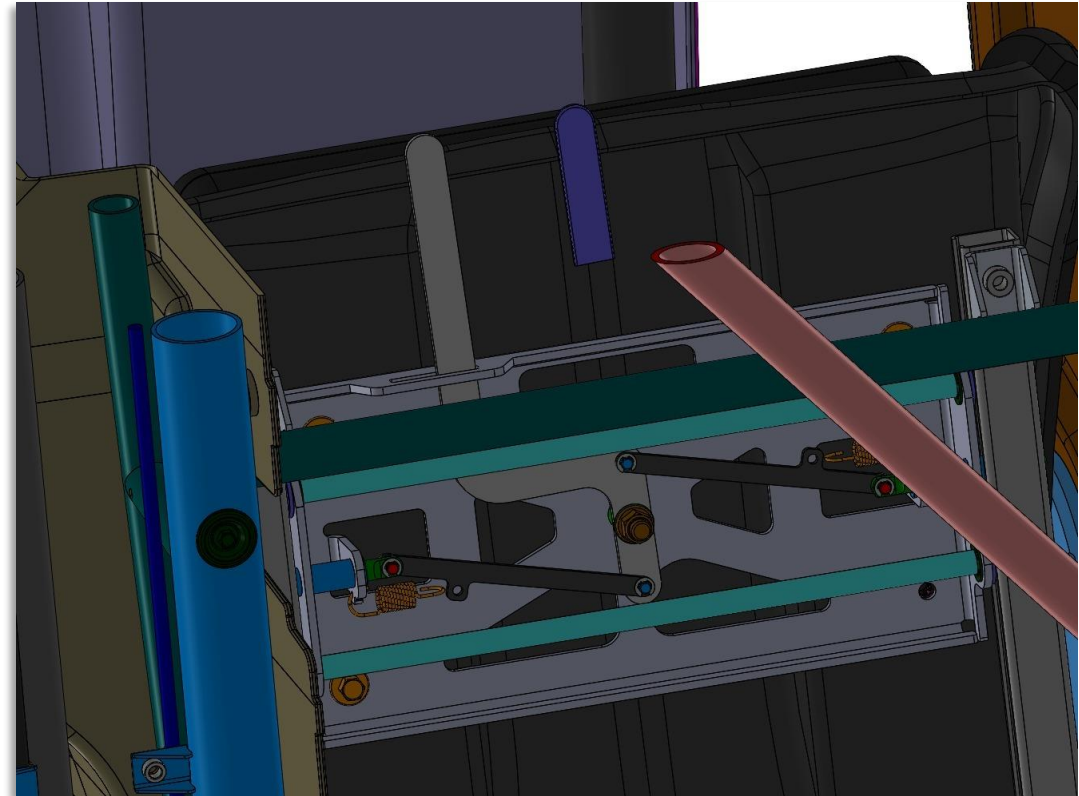

An adjustable floating column also prevents binding from U-joints.

The Speed UTV's motor and transaxle are rigidly mounted together and suspended from above.

- **Maintain Proper Belt Alignment**
- **Drivetrain can be easily removed to be serviced**
- **Not susceptible to damage from bottom of frame impacts**

The Speed UTV's front seat sliders adjust quickly and smoothly to 6'5"+ Drivers

Seat also gets higher the further forward it is adjusted

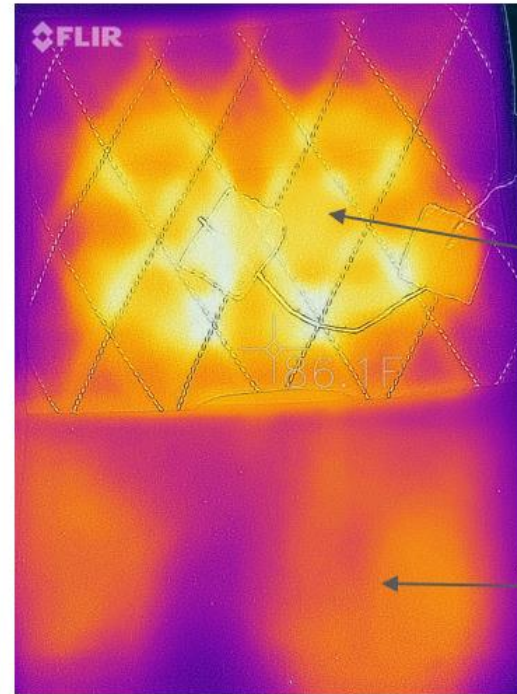

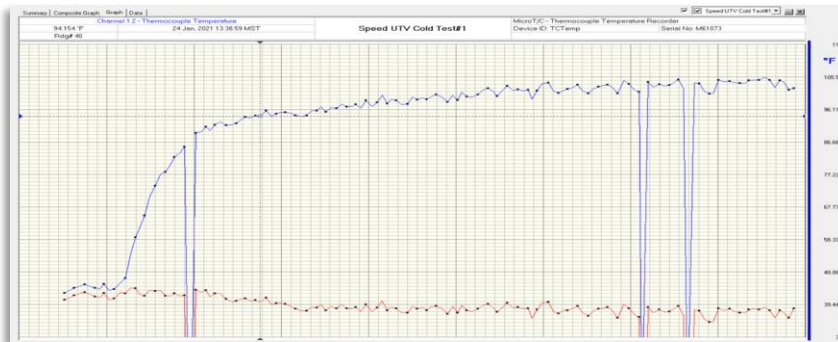

The Speed UTV 5000 Lbs compact winch is completely bolt in.

- **Synthetic Rope**
- **IP67 Solenoid**
- **Dedicated Battery Cable**
- **Rocker Switch and Remote Control**
- **Replacement front grill for OEM finish**
- **Keeps light up “S”**

Roller-Fairlead assembly mounts solidly to bulkhead and allowed for optimal pull angle

The Seat heater has been tested and approved for use with the air cushion. Max surface temp ~100F

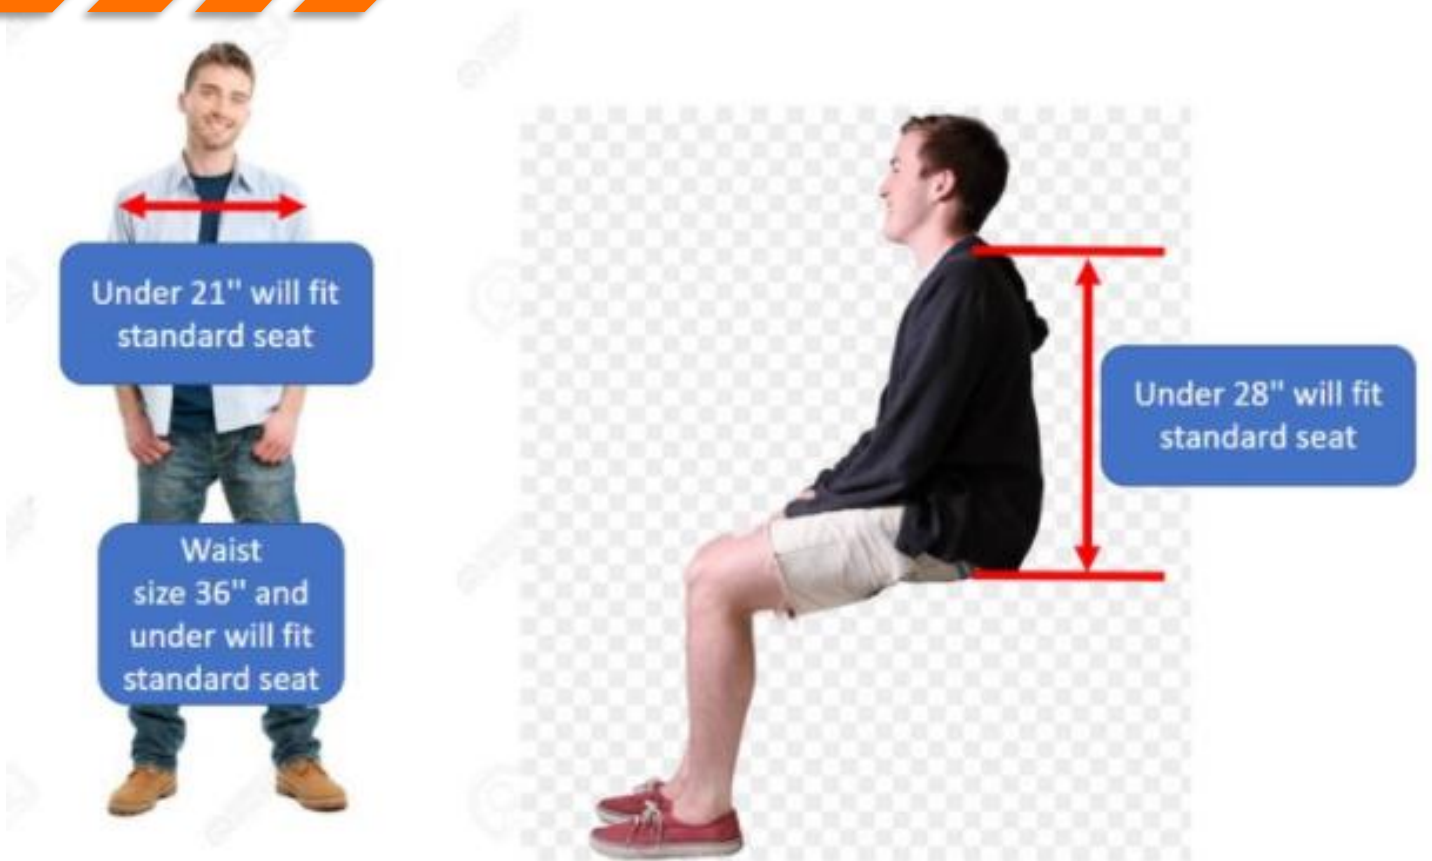

Thermal view after thermal test

Heater area

non- heated area

PCT self regulating material heats up quickly (~1 min) to operating temp 95-105 F and maintains temperature.

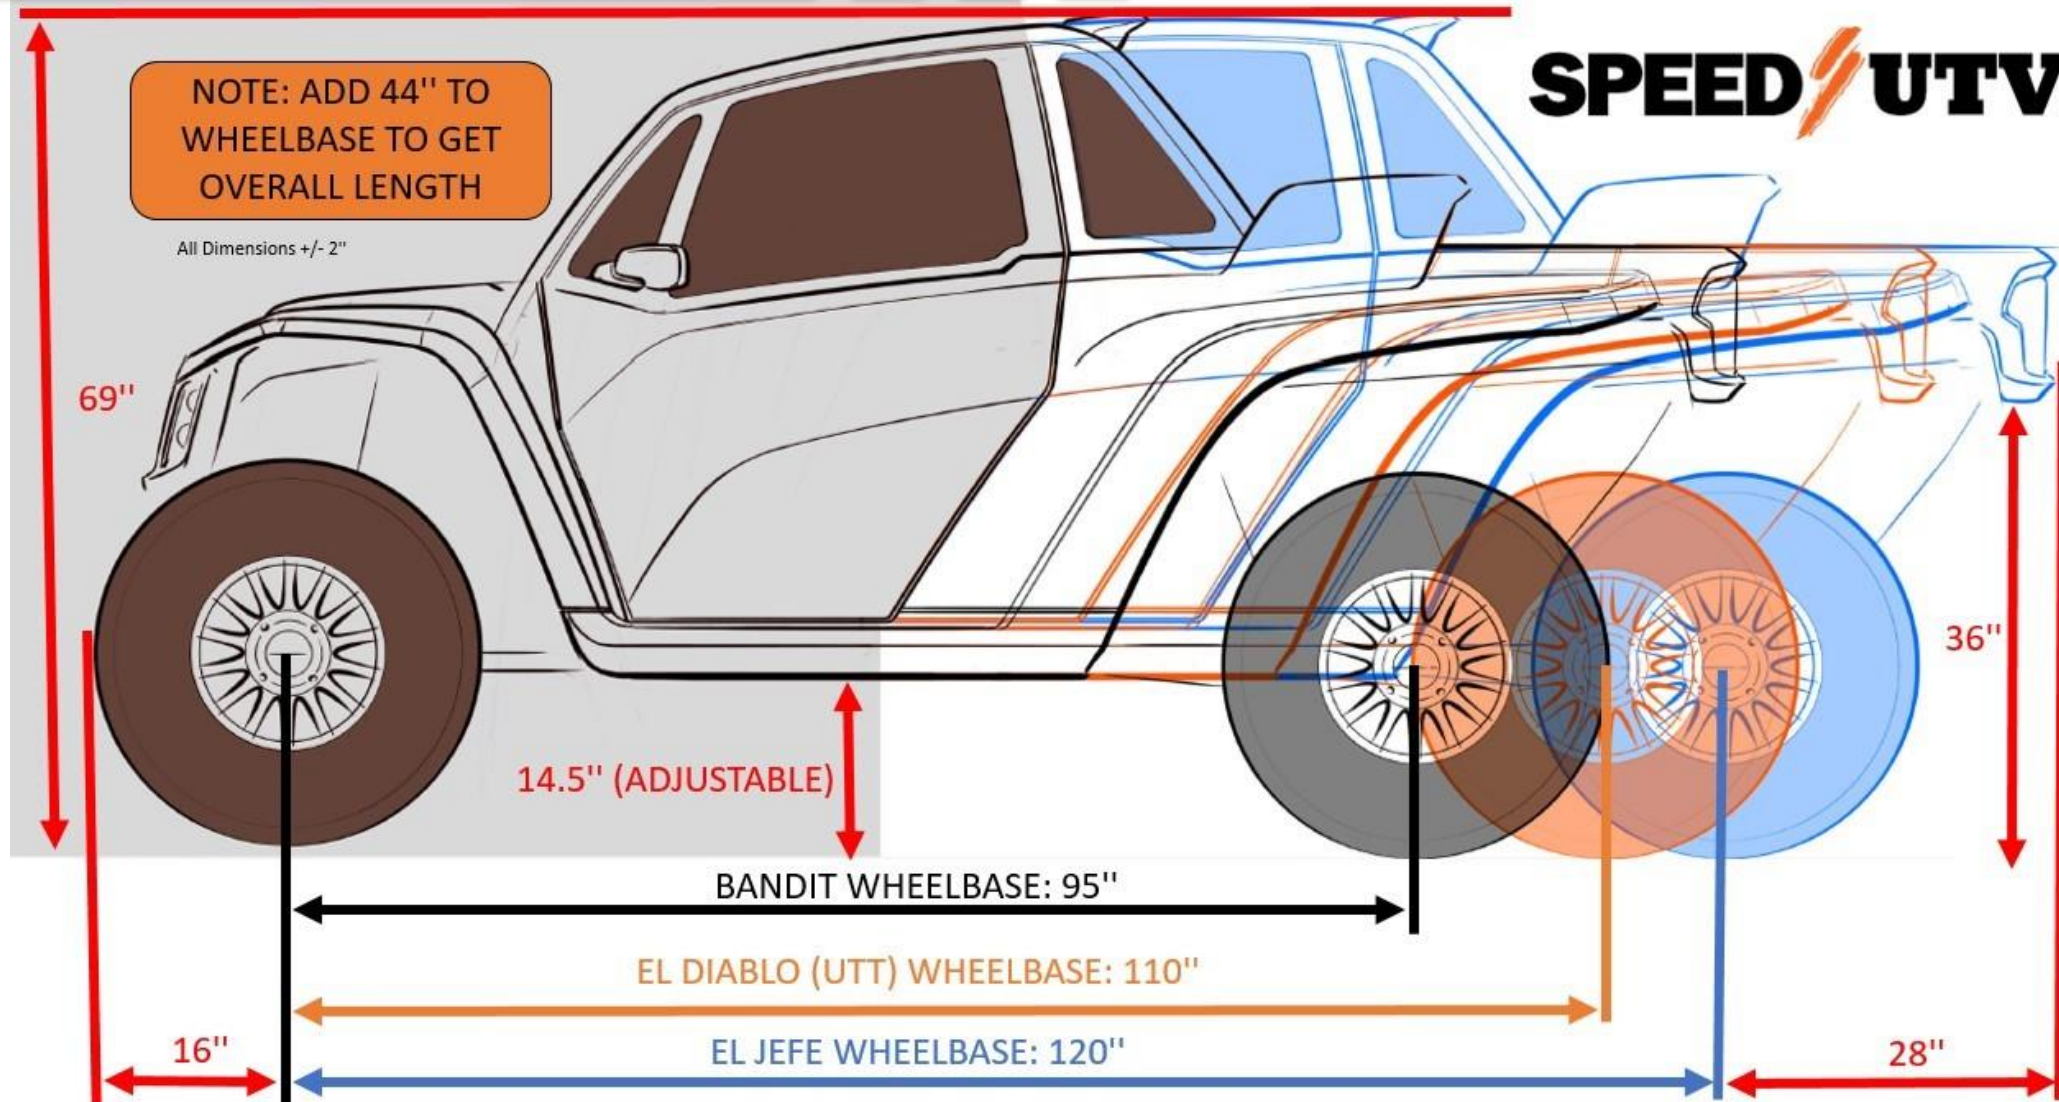

We had everyone from the speed team sit in the seats to determine which was the best fit for different body types.

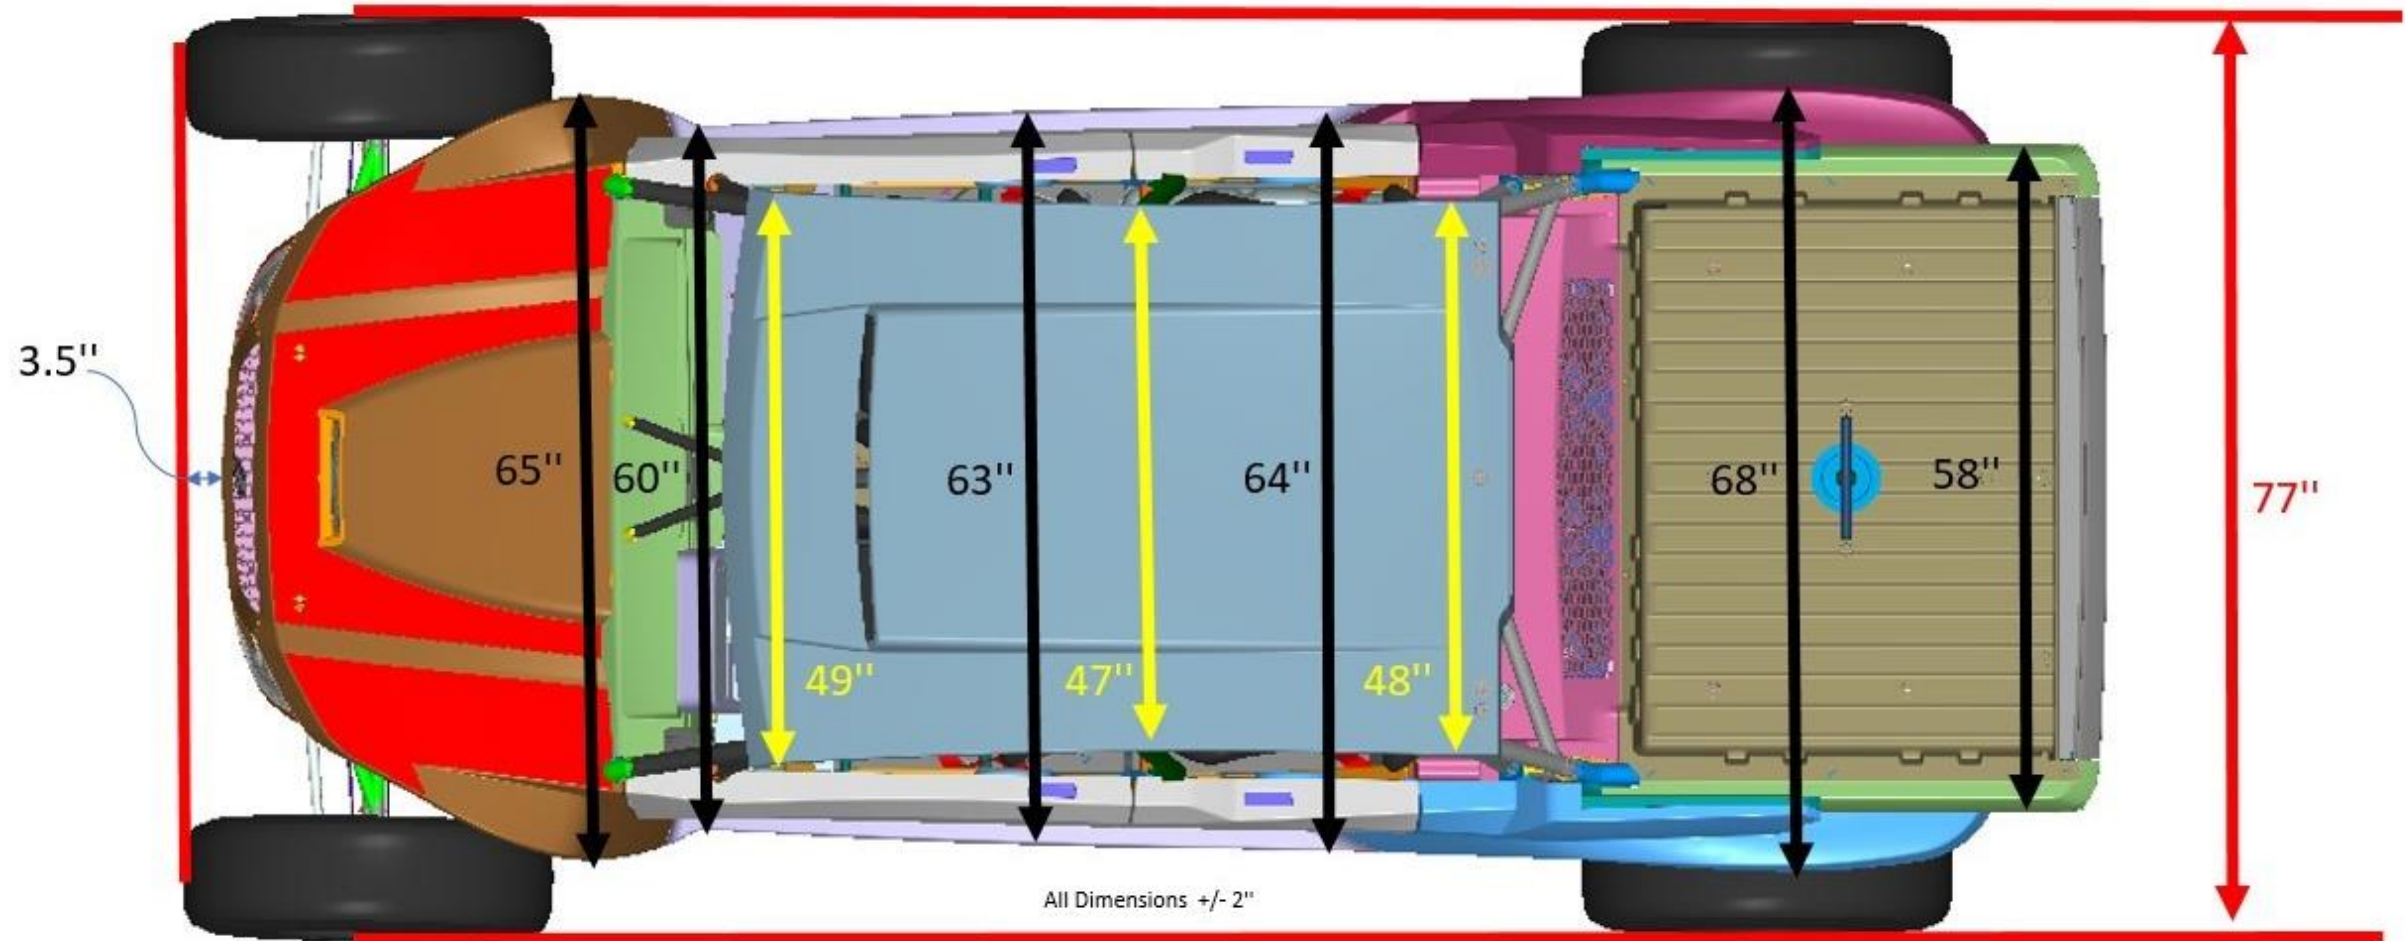

Seats will be available at select dealerships for in person fitment.
